

Note: NNE, NW, and W vectors are too short to be visible

#### LEGEND

VECTOR MAGNITUDE represents adjusted historical and future volume of oil, gas, and water, in Millions of Reservoir Barrels, MMRB, produced from Frio reservoirs from all fields located within 20 miles of the injection site, at direction of vector, from Table 3.7.3-1.

VECTOR DIRECTION represents direction to fields located within a 22.5° arc centered on the vector direction.

Example: SE vector includes production from fields within 11.25° north and south of SE.

VECTOR SUM is the net magnitude and direction of fluid production relative to the site.
